4. 有一因果线性时不变系统, 其传递函数为:

$$H(j\omega) = \frac{1}{j\omega + 3}$$

对于某一特定的输入x(t),观察到该系统的输出是

$$y(t) = e^{-3t}u(t) - e^{-4t}u(t)$$

$$Y(jw) = \int_{-\infty}^{+\infty} [e^{-3t} u(t) - e^{-4t} u(t)] e^{-jwt} dt$$

$$= \int_{0}^{+\infty} e^{-(jw+3)t} dt - \int_{0}^{+\infty} e^{-(jw+4)t} dt$$

$$= -\frac{1}{jw+3} (0-1) - \left(-\frac{1}{jw+4}\right) (0-1) = \frac{1}{jw+3} - \frac{1}{jw+4}$$

$$Y(jw) = \frac{Y(jw)}{H(jw)} = \frac{jw+3}{jw+4} - \frac{1}{jw+4} = 1 - \frac{jw+3}{jw+4} = \frac{1}{jw+4}$$

$$\frac{1}{jw+4} = \frac{1}{jw+4} - \frac{1}{jw+4} = \frac{1}{jw+4} - \frac{1}{jw+4} = \frac{1}{jw+4} - \frac{1}{jw+4} = \frac{1}{$$

5. 有以下连续时间的线性时不变系统, 其传递函数为:

$$H(j\omega) = \int_{+\infty}^{\infty} h(t)e^{-j\omega t}dt = \frac{\sin(4\omega)}{\omega}$$

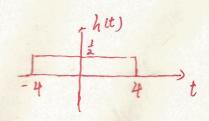

如果该系统的输出信号为一个周期信号:

$$x(t) = \begin{cases} 1, & 0 <= t < 4 \\ -1, & 4 <= t < 8 \end{cases}$$

周期为8, 计算该系统的输出信号y(t)

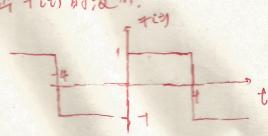

中海里叶支换关系:

$$h(t) = \begin{cases} \frac{1}{2}, & |t| < 4 \end{cases} \stackrel{P}{\rightarrow} H_{ijw} = \frac{\sin(4w)}{w} \qquad \frac{1}{4} \qquad t$$

Flt> = e-4tu(t) (jw) = jury

勇出于(也)的浸料:

国 Ub: y(t) = 7(t) + h(t) = 0
